Applied Data Science
powered by IBM

REDHAT

Redhat training

NPTEL

Data Analysis with Python

PROJECTS

COLLEGE MANAGEMENT SYSTEM Php,Mysql,Javascript

- The Online Campus Management System offers a comprehensive overview of a college's structure, including details about departments, faculty, students, and co-curricular activities. It integrates the functioning of various departments, allowing administrators to share photos and events with the public. The system incorporates online learning features, including timetables, admission details, fee structures, and course information, all accessible from the homepage.

SOCIAL NETWORKING SITE Php,Mysql,Javascript

- A social networking site is an online platform that enables users to create profiles, connect with others, and share content. Users can interact through messages, comments, and likes, fostering communication and relationship-building. These platforms often support diverse media formats and serve as hubs for personal and professional networking.

FAKE NEWS DETECTION Python,Machine learning (NLP,data processing,classification)

- Machine learning, particularly NLP and classification algorithms in Python, is employed for fake news detection. Emphasizing accuracy, the model discerns misinformation even from trusted domains, enhancing credibility assessment in information dissemination.
